**Razor**

Razor is a very contemporary and architectural lighting solution, for Boutique Hotel, Offices, High end Residences, Hospitality etc.

Its linear geometry enables integration of edge line lighting profiles. It defines spaces, outlines and create volumes in three directions. Thanks the recess and its 37° degree sharp edge gives detail to architecture.

It is designed to suit various architectural solutions and can only suggest new ways of designing space through lighting but also creates services and technical installations to be integrated with special requirements. It can be combined with a multitude of optics in different beam packages and beam angles.

Even we can integrate led strip for indirect cove lighting.
